

## WHAT WE STAND FOR...

### Rebreather Association of International Divers

First developed training for rebreather divers and due to demand, it has expanded to include snorkeling, freediving and scuba courses from entry level to instructor examiner levels.

## WHY WE BELIEVE IN RAID...

### World's fastest growing training agency

- RAID training is a culmination of years of experience gained in the dive training industry combined with the latest technology. Created by divers for divers with the aim to improve education and safety.
- Success is measured by quality of divers, not quantity produced.

### Internationally recognised qualifications

There are many Scuba diving agencies around the world, some more well known than others – PADI, TDI, RAID, SSI, IANTD, BSAC, GUE, NAUI etc. They can all use different educational techniques, but the ISO standards guarantee all dive certifications are interchangeable between all agencies. It's no problem joining RAID from another agency or going on a dive trip or holiday. RAID recognition includes...

- ISO & EN compliant certification levels.
- RSTC associate member.
- HSE approved training.

### Raising the bar

- Starting by training great instructors, and in doing so rewriting diver training standards, creating new benchmarks of excellence.
- Highly skilled and extremely dedicated professionals, selected for their passion, expertise, and experience.

### Begin with the end in mind

- Neutral buoyancy and trim are fundamental and are focussed on in our courses right from the start with the open water 20 program through to technical levels.
- Each course is designed with other levels in mind – a system that will prepare you for future advanced diver training.
- Gas management from the start. Not many divers learn to calculate their gas consumption from open water level. As a RAID diver you will learn this from the start.

### Fully online training with lifetime access

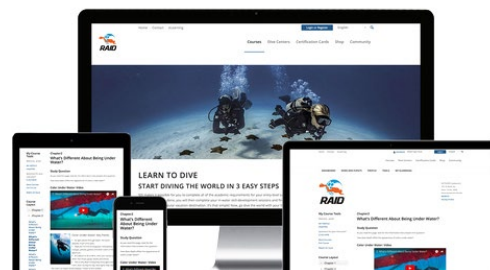

- It's the most comprehensive e-learning program in the world. Over 50 programs online – from snorkelling to rebreather diving.
- Study at your own pace, anytime and anywhere.
- Any updates to materials are automatic and free.

### Protecting the environment

- No paper, no books and no plastic.
- Zero environmental impact
- Electronic certification cards.

### Advanced quality control system

- No tick boxing – mastery of all elements have to be confirmed by both students and instructor.
- Triple-checking system – student and instructor sign-off process and the Dive centre certifies, providing a structure which ensures complete transparency and that standards are all met.

### RAID's Mission

"Our mission is to be the benchmark brand for quality dive training globally through improved technology, training techniques, a proactive quality control system and ensuring the highest standard of dive instructors. The measure of our success is not the number of divers we train but the quality of our divers. Every diver we train is an ambassador for RAID."
